

MARVEL @ The Greatest Invention & Discovery ever...

1 minute bursts of Microessay reading crafted 4U by MJ Kazmierski @ www.GiveTheWorld.org

OPENING QUESTION: What is the difference between an invention and a discovery? What are the two greatest inventions and discoveries in human history? How can we use both to live healthier, happier, longer lives anytime we like? That is three complex questions to open this microessay with, but the answers will be short and sweet. Use them any time you want for the benefit of you and countless others. Now take just 1 minute to read all about it :)

Discoveries come first – they are things which existed before someone came across them and then shared that news with others. Fire is often described as the greatest discovery in human history, but although it did totally transform the lives of early humanoids, it has not been anywhere near as transformative over the ages as... Something which allows us to name, describe, explain and control just about anything and everything in existence... **Language** – our inbred ability to use sounds and symbols to communicate in countless ways has made us Homo Sapiens by far the smartest and most powerful beings in the observable universe. Using languages comes naturally to us, but is not always simple. In fact, the purpose of these Microessays is to take certain words and phrases and clear up what they mean and how they should be used – like the word “book”.

For some of us **books** are sacred cows we take for granted without really understanding or respecting them much. Most people don't think of books as the greatest **invention** in the history of the universe, but that is what they are. Books written on both the simplest and most complex topics of both fact and fiction have transformed the worlds of art, business, medicine, law, religion, politics and all the other things which shape the extraordinarily advanced world we live in today.

Books – those *pretty little portals of quantum information teleportation* – allow us to send countless languages across endless ages and distances to countless people using minimal amounts of the limited resources provided by our perfectly precious home planet. The power they contain while needing little or no power at all to use is unparalleled. Open the pages of any paper book and daylight from the nearest star in our galaxy flown across millions of miles of dark, deadly space will bounce off those ink-stained pages and instantly enter your body via the fleshy lenses we call “eyes” which effortlessly convert the endlessly complex lines of symbols we call “alphabets” into electronic impulses which the eyes send to the brain – a little living lump of lucid, literate lard (human brains are 60% fat tissue) which then delights in converting all that electricity into instant awareness of what the author might have been thinking and feeling possibly thousands of miles and years away from us. A trick only one species can pull off on only one planet out of countless trillions of heavenly bodies known to us – wow... Every single time I open and look at the pages of any old book I can't help being amazed by what is actually happening.

What if every child on Earth started each day of school being reminded that our capacity for developing and using countless languages is what makes human brains the most powerful computational devices in the universe? Shouldn't schools be using those *pretty little portals of quantum information teleportation* to help growing brains develop slowly, surely, perfectly by letting each child read and learn at their own pace and in their own direction by exploring the books they felt they wanted to use as and when was right and good for them? Earth is covered in megatons of books ready to teach anyone anything anytime at all – is that what they are being used for?

That is the philosophy behind our Give The World Academy – making maximum use of the greatest discovery and invention in human history by teleporting books filled with lovely languages (words, numbers, images, Polish, English) to transform the way we use the Internet – the largest publicly owned multimedia library in the history of our universe – to the absolute full.

Why not download some printable PDFs from us free of charge and turn them into your own priceless handmade books as often as you like in minutes using minimum resources and having maximum fun today? Have fun helping us get 3-Booqs into every home and mind on Earth!

THE 5 GOLDEN QUESTIONS

Our brains are the most powerful computational devices we know of in the world today – this series of Miroessays is designed to make full use of that superpower. So we can marvel at all the marvels our ever expanding, endlessly explorable universe serves up each moment and mile our extraordinary cosmic oasis starship is flying us through each moment we are alive.
